

Enhancing smallholder linkages to markets by optimising transport and logistics infrastructure

Key details

Location

Indonesia, Vietnam

Duration

Start Mar 2019

End Dec 2020

Budget

AUD 250,000

Commissioned organisation

CSIRO

Partners

CSIRO Business Development and Business Australia

Project Leader

Dr Chris Chilcott, CSIRO Land and Water

Program

Agribusiness

Project code

AGB/2017/036

to small-scale farmers, and contribute to more informed policy on infrastructure that promotes development and access to markets in Indonesia and Vietnam

The increased demand for nutritious and affordable staple food products has driven increased trade in cattle and horticulture throughout the South-east Asian region.

One of the main focuses of this project is how the findings from the case studies are translated to impact with decision makers, the private sector and farmers (or other potential beneficiaries and donors).

Project outcomes

- Further developing the adapted "TraNSIT" models for case studies in Indonesia and Vietnam to provide a proof-of-concept for stakeholders and develop prototype models
- Developing an understanding of the links between infrastructure, relationships and institutional aspects of transport bottlenecks, and understand critical stakeholders and collaborators who will translate outputs into impact.
- Understanding the capital, skills and equipment requirements to establish "TraNSIT.id" and "TraNSIT.vn" within country.
- Developing a business case and proposal for a larger project: "Linking smallholder farmers to markets: through improved transport infrastructure, logistics and investments in Indonesia and Vietnam".

Overview

This project aimed to evaluate opportunities to reduce logistics costs
